

1. INSTALLATION OF ANDROID STUDIO

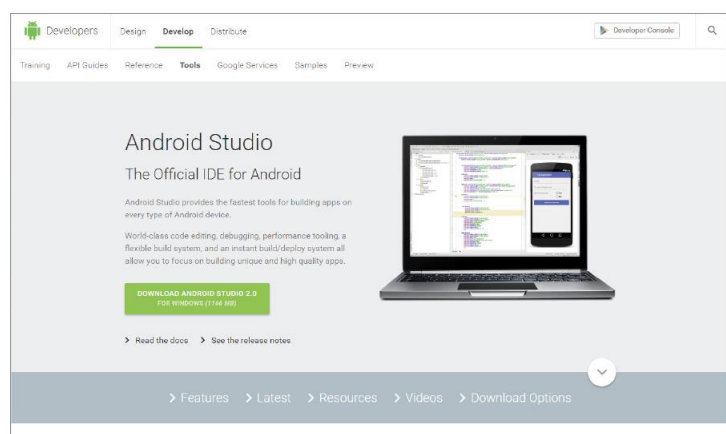

The first and most important piece of software you need to download is Android Studio 2. After you have downloaded and installed Android Studio 2, you can use the SDK Manager to download and install multiple versions of the Android SDK.

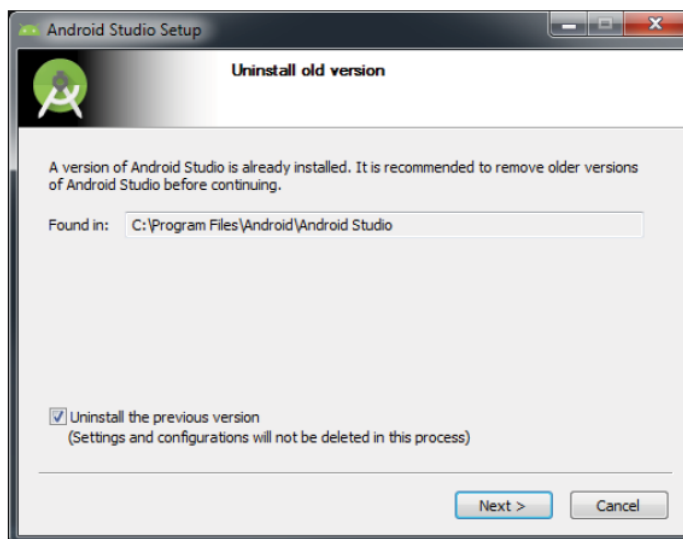

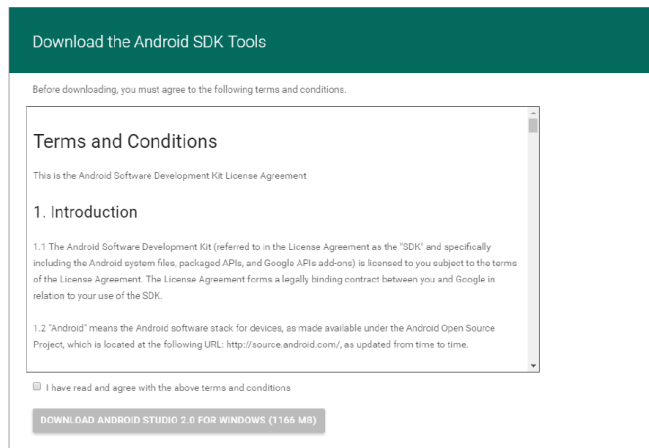

You can download Android Studio 2 from <http://developer.android.com/sdk/index.html> .

Android Studio 2 is packaged in an executable. Run the install process to set up Android Studio 2.

After you've downloaded and run the setup executable, use the following steps to go through the installation process:

1. Accept the terms and conditions shown in Figure .
2. If you have an older version of Android Studio already installed on your computer, the Android Studio Setup prompts you to automatically uninstall it. Even though the old version of Android Studio will be uninstalled, the settings and configurations are retained. You have an opportunity to reapply those settings and configurations to Android Studio 2 after the setup has completed. Figure shows the screen where you are prompted to uninstall an old version of Android Studio.

3. Click Next on the Welcome to Android Studio Setup screen .

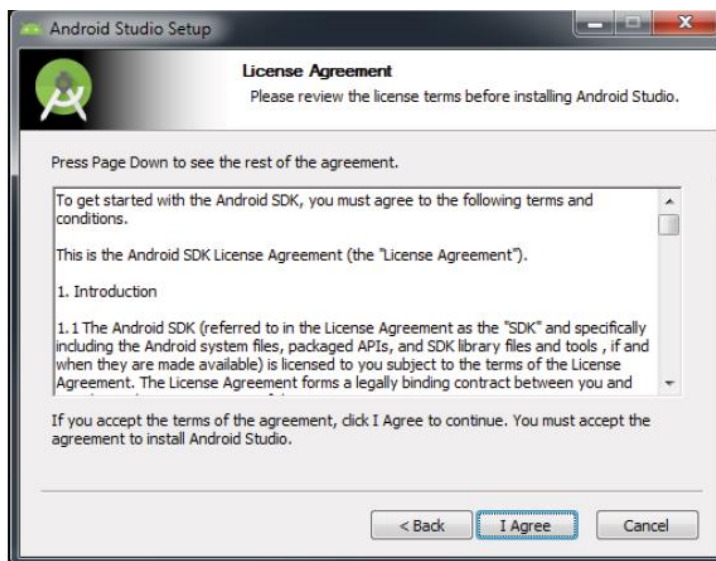

4. Pick which components of Android Studio you want to install from the screen shown in Figure . Android Studio is selected by default (and cannot be deselected), which makes sense given that you are going through all of this trouble for the distinct purpose

of installing Android Studio. Android SDK and Android Virtual Device are also selected by default. Click Next to accept the default choices and continue.

5. You are presented with the License Agreement, as shown in Figure . Click I Agree to continue.

6. On the configuration settings screen, it is best to accept the default locations specified by the setup process and click Next to continue. You see the Choose Start Menu Folder screen (shown in Figure 1-11). Click Install to kick off the Android Studio 2 installation.

7. Installing Android Studio 2 could take a few minutes, depending on the speed of your computer.

You are presented with a progress bar to help you track the state of the installation.

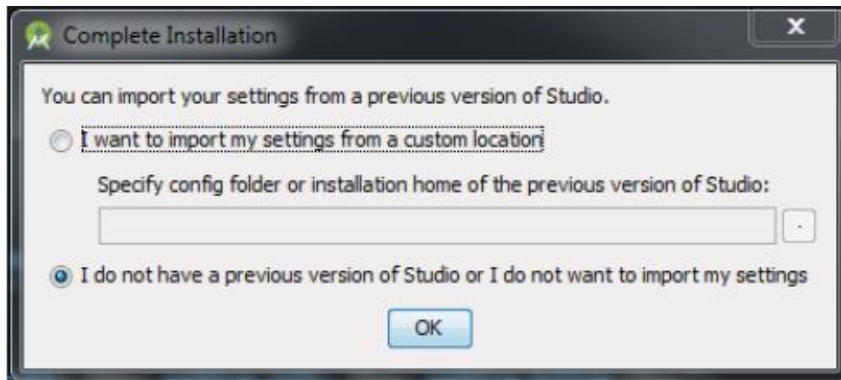

Android Studio 2 is installed with a default SDK (Software Development Kit), in this case Marshmallow. Later in the process you have the opportunity to install other SDKs.

The Android SDK allows you to develop and write applications geared for a specific version of Android. In other words, applications written with the Marshmallow SDK run on Android devices running Marshmallow, but they also possibly run on other versions depending on which features of the SDK you used in the application.

8. When the install is complete, you will see a Completing Android Studio Setup screen (shown in Figure 1-12). Leave the Start Android Studio box checked and click Finish.

9. Android Studio 2 prompts you to either import settings from a previous version of Android Studio or continue with new settings. If you uninstalled a previous version in the first step of the installation process, Android Studio offers you a chance to recover the settings used in that previous version and apply them to Android Studio 2 .

2. Development of Hello World Application.

activity_main.xml :

```
<?xml version="1.0" encoding="utf-8"?>
<androidx.constraintlayout.widget.ConstraintLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:tools="http://schemas.android.com/tools"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".MainActivity">
    <TextView
        android:layout_width="300dp"
        android:layout_height="64dp"
        android:text="Hello World!"
        android:textSize="50dp"
        app:layout_constraintBottom_toBottomOf="parent"
        app:layout_constraintEnd_toEndOf="parent"
        app:layout_constraintStart_toStartOf="parent"
        app:layout_constraintTop_toTopOf="parent" />
</androidx.constraintlayout.widget.ConstraintLayout>
```

Mainactivity.java

```
package com.example.helloworld;

import androidx.appcompat.app.AppCompatActivity;
import android.os.Bundle;

public class MainActivity extends AppCompatActivity {

    @Override
    protected void onCreate(Bundle savedInstanceState) {
```

```
super.onCreate(savedInstanceState);  
setContentView(R.layout.activity_main);}}
```

OUTPUT :

Hello World!

3. Design an application to implement activity life cycle.

activity_main.xml :

```
<?xml version="1.0" encoding="utf-8"?>
<androidx.constraintlayout.widget.ConstraintLayout
xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".MainActivity">
    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Hello Android Studio!"
        android:textSize="35dp"
        app:layout_constraintBottom_toBottomOf="parent"
        app:layout_constraintEnd_toEndOf="parent"
        app:layout_constraintStart_toStartOf="parent"
        app:layout_constraintTop_toTopOf="parent" />
</androidx.constraintlayout.widget.ConstraintLayout>
```

JAVA :

```
package com.example.myactivity;
import androidx.appcompat.app.AppCompatActivity;
import android.os.Bundle;
import android.util.Log;
public class MainActivity extends AppCompatActivity {
    @Override
```

```
protected void onCreate(Bundle savedInstanceState) {  
    super.onCreate(savedInstanceState);  
    setContentView(R.layout.activity_main);  
    Log.d("onCreate","Invoked");  
}  
  
@Override  
public void onStart()  
{  
    super.onStart();  
    Log.d("OnStart","Invoked");  
}  
  
@Override  
public void onResume()  
{  
    super.onResume();  
    Log.d("OnResume","Invoked");  
}  
  
@Override  
public void onPause()  
{  
    super.onPause();  
    Log.d("OnPause","Invoked");  
}  
  
@Override  
public void onStop()  
{  
    super.onStop();  
    Log.d("OnStop","Invoked");  
}
```

```
@Override
public void onRestart()
{
    super.onRestart();
    Log.d("OnRestart","Invoked");
}
@Override
public void onDestroy()
{
    super.onDestroy();
    Log.d("OnDestroy","Invoked");
}
}
```

OUTPUT :

```

                String s3=e.getText().toString();

                String s4=m.getText().toString();

                tv.setText("name :"+s1+"\n"+"Regd.No :"+s2+"\n"+"email :"+s3+"\n"+"Mobile :"+s4);

            }

        });

    }

}
```

OUTPUT :

The screenshot shows a mobile application interface. At the top, there is a status bar with the time 10:24 PM, a data speed of 3.0 KB/s, and various icons for notifications, cellular signal, Wi-Fi, and battery. Below the status bar, a purple header bar contains the text "hello world". The main content area is white and contains four input fields, each with a label and a horizontal line for text entry. The labels are "Rohit", "Y20CS300", "abc123@gmail.com", and "8639674249". Below the input fields is a purple button with the text "SUBMIT". At the bottom of the screen, there is a green text display showing the entered values: "name : Rohit", "Regd. No : Y20CS300", "email : abc123@gmail.com", and "Mobile : 8639674249". The bottom of the screen also shows the standard Android navigation bar with back, home, and recent apps icons.

10:24 PM | 3.0 KB/s
